### Summary

CAMCo Ltd is a Port Moresby based company providing a wide range of Information & Communication Technology Services for Papua New Guinea organisations.

Our principal, Mr McLachlan has been active in a wide range of Information & Communications Technology systems design, development and implementation projects in Papua New Guinea, Australia, Solomon Islands and East Timor for over 30 years, including several projects for various International Aid Organisation funded projects.

Our services fall into three main categories:

- **Systems Design and Development**
- **ICT Consultancy and Support**
- **Internet Related Services**

### Systems Design and Development

We specialise in custom designed operational management information systems. We have many years of experience in developing systems utilising a range of platforms and technologies. Because of this broad skill set, we are able “mix and match” appropriate technologies for different system components and integrate them seamlessly into a comprehensive Information System.

The principal Database Management Systems our systems use are:

- Microsoft SQL Server
- MySQL
- SQLite
- Microsoft Access

The main development environments utilised are:

- SQL for data management
- Microsoft Access for MS Office based information systems.
- PB/Win for stand-alone Windows based application.
- PHP/HTML/CSS for Web/Browser based components/solutions.

Our approach is to:

- Conduct operational analyses of your organisation and provide recommendations for appropriate Information Systems to meet your needs.
- Design and develop customised information systems to meet your specific management, operational and legislative needs.
- Integrate and utilise data from existing financial accounting etc systems where necessary for enhanced operational management and reporting.
- Provide specifically targeted on-the-job training to your employees in the supplied Information Systems.

At CAMCO, systems can be developed even more rapidly through the use of our libraries of pre-programmed functions and templates for different development environments. These libraries, developed and refined over many years, ensure that our clients not only receive great value but that their applications are delivered quickly with a minimum of bugs. In other words -- fast, accurate professional solutions at an economical price

## **ICT Consultancy**

We provide expert advice on and assistance with:

- Systems Analysis and production of scoping or detailed specifications for information systems and custom application software.
- Selection, procurement and deployment of appropriate IT infrastructure including LAN and WAN solutions.
- Selection, procurement and deployment of appropriate hardware and off-the-shelf software.
- Determination of IT related staff training and development needs.
- Internet based systems such as email, website, remote access etc.

We are not aligned with any supplier of specific hardware or commercial software and can be relied on to provide professional, independent advice.

## **Internet Related Service**

Through our subsidiary HostingPNG (<https://www.hostingpng.com>), we provide a range of internet related services including

- Domain Hosting
- Website Development
- Email and mail server configuration
